# Let's get back to school

with on-the-go  
personal safety shields  
for wherever your  
learning takes you.

# iSHIELD Portables

The **i-SHIELD** portable personal safety partition allows students and teachers to take responsibility for helping to limit exposure to germs and viruses in the face-to-face physical learning environment.

Made of poly carbonate, these light weight, durable folding individual partitions are part of Highmark's line of Personal Protective Equipment (PPE). These self-supporting units require no tools or hardware for assembly and each component can be simply cleaned and disinfected. They are equipped with a built-in handle and fold flat for easy mobility. At 20 inches high, each unit provides considerable protection from those nearby without being overly obtrusive – enabling peer-to-peer eye contact and interaction that is especially important for engaging learning environments.

As students and teachers rotate from class to class or to the lunchroom or library, their **iSHIELD** comes too. This concept encourages individuals to own their part in helping to limit exposure to germs and viruses for themselves and those around them.

Individual Desks | Labs | Group Tables  
Communal Areas | Libraries | Lunch Rooms
